1. Which option lists the steps of training a logistic regression model in the correct order?   1 / 1 point

    1. Use the cost function on the training set.
    2. Update weights with new parameter values.
    3. Calculate cost function gradient.
    4. Initialize the parameters.
    5. Repeat until specified cost or iterations reached.

    ✓ **Correct**

2. What is the objective of SVM in terms of hyperplanes?   1 / 1 point

    ✓ **Correct**

3. Logistic regression is used to predict the probability of a: 1 / 1 point

    ✓ **Correct**

4. In which cases would we want to consider using SVM?   1 / 1 point

    ✓ **Correct**

5. What is a disadvantage of one-vs-all classification?   1 / 1 point

    ✓ **Correct**
